

UMBILICAL SPOOLER

OCS owns different types of spoolers specified for various kinds of job scope. This particular Umbilical Spooler is utilised for our Decommissioning spread and has two compartments where one compartment for high pressure hoses of water abrasive cutting system and another section is for soil plug removal hoses.

This spooler is driven via a Hanggluns motor and powered by our Deutz 913 diesel engine power pack.

All our spoolers have been designed, engineered, manufactured and tested by our own OCS team and as the saying goes, We are a one stop shop.
